opposite to that upon which the wind blows: they constantly shift their quarters with the wind.

It was a laborious ascent to reach the south-eastern summit of the rock, which is one thousand five hundred and ninety-five feet above the Mediterranean; but amply was the labour repaid: for my eye never embraced a more magnificent prospect. Looking towards the east, the bold coast of Granada stretched in a wide curve, ending in the dim mountains that lie around Malaga. Withdrawing the eye from the Spanish coast, it wandered over the calm Mediterranean, streaked like a summer lake, and baring its trembling bosom to the sunbeams. Farther to the south, was seen an indistinct line, stretching eastward; this was the coast of Africa: and towards the west, this line grew more distinct, till, at scarce three leagues across, it terminated in the dark high mountain of Barbary—one of the Pillars of Hercules. Turning towards the north, lay in unruffled tranquillity, the bay that separates Gibraltar from the Spanish Main. The vessels at anchor were mirrored below;
many little boats were rowing about; and several mysticos and scampiavas had hung out their enormous sails, to woo the light airs that came, and died upon the summer sea. Beyond the bay, was the coast of Andalusia, seemingly within a gun-shot; the town of Algesiras nestling at the head of the bay, and in the hollow of the mountains that rose behind, dappled with the lights and shadows that the few wandering clouds cast upon their valleys and acclivities. Nor was the gigantic rock itself a picture of no importance in this glorious view: its rugged and fearful precipices, and deep ravines—a milk-white goat here and there standing upon a giddy point—the sentinels far below, their arms glittering in the sunshine—the verdure that covered the lower declivities, and fringed the bay—these completed the picture: a picture that I think can never pass from my memory.

One of the days I spent at Gibraltar was a Sunday. This day is there observed with great strictness: prayers are read to the troops on parade, and also in the government house. But it is a most unaccountable
fact, that there should be no place of public worship for the large Protestant English population of this British possession: this is bitterly complained of. Hundreds among the troops would gladly attend church, if there was a church to attend; and many, rather than go to no temple at all, frequent the Catholic chapel. A Protestant church was begun some time ago, but want of funds has prevented its completion. All this reflects little credit upon those who have the management of such matters.

Gibraltar is a fallen and falling place, as a place of commerce; and there is no prospect of any revival. In speaking of Cadiz, I have already said that the whole, or almost the whole licit and illicit trade of Gibraltar, has been transferred to that city. The loss of the Cadiz market alone, which took up extensively the articles which were received into the free port of Gibraltar, might easily account for its decline. But there is still another cause for the decline of Gibraltar; a cause that might probably have been of itself sufficient to determine the ruin of this settlement,
and which has, at all events, materially hastened it: I allude to the epidemic. Since the last terrible visitation of this kind, there has been a general feeling of insecurity: many, soon afterwards, removed their establishments elsewhere; and others are ready, upon the first rumour of disease, to quit a spot where life is held by so precarious a tenure.

Every one knows the history of Gibraltar. Before the establishment of the Moorish empire in Spain, Gibraltar was called Calpe; under the Moors it bore the name of Gibel-Tarif, and subsequently of Gibraltar. The importance attached to Gibraltar during the last years of the Moorish empire, has lately been made better known to us by that delightful work, the Chronicles of the Conquest of Granada. In the year 1704, Gibraltar was taken by the combined English and Dutch fleets under Sir George Rooke; and in 1713 it was confirmed to England by the peace of Utrecht. The only important attempt to wrest Gibraltar from the English was made in 1782, by the combined fleets of France and Spain; but the attempt proved abortive, and
the rock of Gibraltar may now be considered inseparably united to the British empire*

* Some account of this enterprise seems to be a natural digression; and as the fullest account of the rash attempt which led to the abandonment of the enterprise, is to be found in the work of M. Bourgoing, I make no apology for transferring it to these pages. "The court of Spain, weary of the fruitless blockade of Gibraltar, which excited the ridicule of all Europe, and of the besieged themselves, seriously determined to take this fortress by some extraordinary expedient or other, against which its steepness, its formidable artillery, and all the skill of General Elliot should prove unavailing. Plans poured in from all quarters; some bold to extravagance, others so whimsical, that it was scarcely possible to look upon them as serious. Several of this kind I received myself. One of those sent to ministers, formally proposed to throw up, in front of the lines of St. Roch, a prodigious mount, higher than Gibraltar, which would consequently deprive that fortress of its principal means of defence. The author had calculated the quantity of cubic fathoms of earth, the number of hands, and the time that would be required by this enormous undertaking, and proved that it would be less expensive, and less destructive than the prolongation of the siege upon the plan on which it had been begun.

"Another proposed to fill the bombs with a substance so strongly mephitic, that on bursting in the fortress, they would either put to flight, or poison the besieged with their exhalations.

"The plan of D'Arçon was at length presented, and engaged the more serious attention of the Spanish government.

"This plan, first projected at a distance from Gibraltar, by that engineer, who, notwithstanding the issue of that famous siege, still enjoyed the reputation of a man of great talents, was afterwards matured and modified by him within sight of the fortress. But how many crosses was he doomed to experience! • • • • • • Scarcely any thing is known
After having spent some pleasant days at Gibraltar, I inquired respecting conveyances respecting it, except what relates to the ten floating batteries, which, on the 13th of September, 1782, foolishly exposed themselves to the fire of Gibraltar, and were reduced to ashes by the red-hot shot from the English batteries. This method of summing up the result of enterprises, is very convenient for indolence or malignity, but would furnish history with very erroneous elements. Enlightened by contemporary historians, her pages will inform posterity, that if this great undertaking failed, it was from a concurrence of circumstances which the genius of D’Arçon could not possibly control. One of the principal was, the hurry with which the plan was put in execution, before all the necessary preparations had been made for ensuring its success. It is well known that the ten batteries had been so constructed as to present to the fire of the fortress, one side covered with blinds three feet thick, and kept continually wet by a very ingenious contrivance. The red-hot balls were thus expected to be extinguished on the spot where they penetrated; but this first measure proved incomplete. The awkwardness of the caulkers prevented the working of the pumps, which were designed to keep up the humidity. It succeeded only on board one of them, the Talla-Piedra, and that very imperfectly. But this was not all; though the place where they were to take their stations had been but very slightly sounded, they had received instructions what course they were to pursue, in order to avoid striking, and to place themselves at a proper distance. This precaution likewise proved unavailing. Don Ventura Moreno, a brave seaman, but incapable of executing a plan, stung to the quick by a letter sent him in the evening of the 12th of September, by General Crillon, which contained this expression: ‘If you do not make an attack, you are a man without honour;’ hastened the departure of the batteries, and placed them in an order contrary to the plan which had been adopted. In conse-
to Malaga. I learnt that it was a two days' journey on mule back; and that the charac-

quency of this mistake, no more than two could sustain themselves at the concerted distance of two hundred fathoms. These were, the Pastora, commanded by Moreno himself, and the Talla-Piedra, on board of which, were the Prince of Nassau, and D'Arçon: but they were exposed to the fire of the most formidable battery; that of the Royal Bastion, instead of all ten being drawn up around the old mole, and receiving only sidewise the fire of that battery.

"The only two batteries which occupied this dangerous post made great havoc, and sustained dreadful loss. The Talla-Piedra received a fatal shot. In spite of all precautions, a red-hot ball penetrated to the dry part of the vessel: its effect was slow. The Talla-Piedra had opened her fire about ten in the morning; the ball struck her three and five. The mischief did not appear irremediable till midnight. The San Juan, one of her next neighbours, shared the same fate. It appears certain that the eight others remained untouched.

"But what was still more distressing, every thing was wanting at once: cables to tow off the batteries in place of accident, and boats to receive the wounded. The attack was to have been supported by ten ships, and upwards of sixty gun-boats. Neither boats, gun-boats, nor ships, made their appearance.

"Lastly, according to the projected position, the gun-boats were to have been seconded by the one hundred and eighty pieces of cannon at the lines of St. Roch. This co-operation was rendered impracticable. Near four hundred pieces of artillery were to have opened at once upon North Bastion, Montagu Bastion, and Orange Bastion. With a superiority of nearly three hundred pieces, D'Arçon flattered himself that he should be able to silence the artillery of the fortress. What was his consternation when he found that the besiegers had no more than sixty or seventy pieces, to oppose to more than two hundred and eighty belonging to the besieged.
ter of the country between Gibraltar and Malaga, was precisely the same as that which

"The combined squadron remained quiet spectators of this tremendous scene: Guichen, who commanded the French ships, sent to offer assistance to Moreno; who replied that he had no occasion for any.

"Matters continued to grow worse; and no remedy could be devised. Eight of the batteries were at too great a distance to do or to sustain much injury. The two others bore in their bosoms the elements of destruction. Moreno, despairing of being able to save any of them, and resolving that they should not fall into the hands of the English, directed that those which were already in flames should be suffered to burn, and that all the others should be set on fire. I have seen the original order to this effect. Such was the result of that day, on which were annihilated ten vessels—the masterpieces of human ingenuity—the building of which cost three millions of livres, and whose artillery, anchors, cables, rigging, &c., amounted to two millions and a half more.

"D'Arçon, in the first moment of his consternation, acknowledged that he alone was to blame for the fatal issue of the day. I had for a considerable time in my possession the original of the short, but emphatic letter, which he wrote to Montmorin the ambassador, from the very shore of Algesiras, amid the dying sound of the artillery, and by the light of the burning batteries. It was as follows: "I have burned the Temple of Ephesus; every thing is lost, and through my fault. What comforts me under my misfortune is, that the glory of the two kings remains untarnished." But on recovering from the shock, D'Arçon wrote a learned memoir, in which he took great pains to modify the confession which had escaped him; and to prove that he had more than one partner; or rather that circumstances, the most untoward and imperious, constituted his only fault.

"Scarcely had Gibraltar foiled beneath its walls, this formidable
I had travelled from Cadiz. Tempted the same afternoon by a fine breeze from the west, and by an offer of a passage in a Spanish mystico, which the captain assured me would sail at six next morning, and would be in Malaga the same evening, I got all ready,—took out my passport and a bill of health, and went to bed in the hope of sleeping next night in Malaga. I gladly avail myself of this opportunity of mentioning the unjustifiable exactions of the public offices in this British possession. Throughout the whole of Spain, more than two pecetas (1s. 8d.) had never been demanded at any passport office; but at Gibraltar, where it is difficult to understand upon what principle an English attempt, when in sight of our armies and our squadron, the place was re-victualled by Admiral Howe, who afterwards, with his thirty-six ships, boldly entered the Mediterranean. He was seen from Buena Vista passing from one sea to the other; every spectator supposed that he was running into the jaws of destruction. The fifty-two ships which were in the bay, weighed anchor, and pursued him; but Howe baffled our endeavours, as fortune had done our plans; and returned through the Streights in the same security as he had entered them.” Such is the account given by M. Bourgoing. He had access to know the facts, and they are probably correct; but there is, evidently, a French polish over the whole detail.
subject should require permission of the English authorities to visit Malaga,—I was charged a dollar. As well might an Englishman about to visit Calais, be obliged to have the permission of Sir Richard Birnie. At all events, the charge is extravagant, and therefore unjust; the petty officer who signs his name at Gibraltar, and pockets the crown, is not, like a consul in a foreign port, the representative of the British government, and obliged to spend all, or more than all, that he receives. In Gibraltar the governor is the representative of the government; and the demand of a dollar from every Englishman who passes through Gibraltar, can only be regarded as a robbery of British subjects to support a sinecurist.

Looking from my window, about five next morning, I saw with dismay, that the wind had increased almost to a storm, still from the west, but too violent to allow any vessel to beat out of the bay; for it is a great difficulty attending the navigation from Gibraltar, that the most favourable wind for the Levant, is the most adverse for carrying a vessel out of the bay. I had made up my
mind to bear the delay, and be contented with reading the English newspapers, and with an English dinner in the hotel, when the master of the mystico sent to inform me that the wind had so much abated as to permit him to beat out, and that he was on the point of sailing. I immediately ran down to the harbour, hired a boat, and was just in time to catch the mystico upon one of its tacks. The vessel had been obliged to leave the harbour, because, after gun-fire at five o'clock, the gates and harbour are shut, and nothing is permitted to pass out or in.

We beat out of the bay with some difficulty;—a brilliant sun-set flamed upon the rock of Gibraltar,—and just as the sun sunk behind the mountains of Barbary, we doubled Point Europa,—and lying to our course, went swiftly through the water. The current alone would carry a vessel from Gibraltar to Malaga, for it constantly sets in through the Streights into the Mediterranean, a fact that has puzzled both navigators and philosophers: but with a strong westerly breeze, the doubt was not, whether we should reach Malaga by
day-break, but whether we might not pass it during the night; for the masters of these Spanish boats are not the most scientific of navigators. I sat upon deck till the line of coast became invisible, and then lay down on the lee side, where I slept till day-break; and looking up, I found we were traversing the bay of Malaga, and that we should be in the harbour in less than an hour. Malaga is an imposing object from the sea: it stands in the centre of a wide bay, flanked and backed by lofty mountains; and by the picturesque ruins of its ancient fortifications and castle, which cover the hill that rises immediately to the east, and seem, from their great extent, like the remains of a former city. When we had cast anchor, the health-boat rowed out to us: fortunately quarantine had lately been removed; and after a slight examination of luggage, I was permitted to go on shore; and on the recommendation of the British consul, I established myself in the Fonda de los tres Reyes.

Malaga I found an interesting, agreeable, and hospitable city; and I recollect with pleasure the time I spent there. After break-
fasting, and waiting upon his Britannic majesty's consul, Mr. Mark, whose attentions I have great pleasure in acknowledging, I committed myself to chance, and perambulated the city. One of the first places I happened to enter, was the market, where I was attracted by the singularity of a usage which I never remarked elsewhere. Various stalls were appropriated to the sale of poultry; but these were not exposed whole;—fowls, ducks, partridges, and various other birds, were cut up: here was a row of legs,—there, of wings, or breasts,—these were sold separately; and I saw no lack of purchasers. The general aspect of the population of Malaga, I found even more Moorish than that of Seville; and it afforded innumerable admirable pictures of idleness. Many of the market people were seated on the earth on circular mats, and the stools in general use were still lower than in Seville; but hundreds appeared to be doing nothing: groups sat upon the ground, their backs against the wall of some house or convent; others lay upon the steps at the entrance of the churches;
and many sauntered listlessly to and fro in
the sun, which at this season was rather
coveted than shunned. All these idlers were
wrapped up in their brown cloaks,—most of
them ragged and patched,—and the greater
number were regaling themselves with deli-
cious melons, which they leisurely and indo-
lently cut up with their long clasp knives—
so often in Malaga put to less innocent pur-
poses. Malaga is noted for its idle and bad
population; a character which I believe it
deservedly maintains, and which results
chiefly from the facility with which the wants
of life are supplied. A good melon may
often be purchased for two or three quartos.
A quartillo of wine (something more than
a bottle) costs no more. A little barrel of
anchovies may be purchased for two reals
(4½d.); and if so, the fresh sardina must be
to be had at a price that will put a meal
within the reach of any one who is possessed
of a quarto (less than a farthing). These
luxuries, indeed, require a few quartos to
obtain them; and if begging be not sufficient
for this, the mala gente of Malaga (for this
is the expression commonly applied to its
population) are at no loss to find the quartos in some other way. The whole idle population of Malaga are thieves: and in so degraded a state is public justice in this city, that crimes of a far darker hue than theft, pass unpunished; because, to take notice of them, would be to court the worst effects of revenge. In another chapter I have illustrated, by an example, the perfect security with which, in Malaga, a man may obey the very worst passions. A woman who dares prosecute the murderer of her husband, speedily receives a private intimation that effectually silences her; and it has been not uncommon, for money to be put into the hands of an escribano previous to the commission of a murder, in order to ensure the services and protection of a person so necessary to one who meditates crime. I will relate a trifling circumstance that occurred while I was at Malaga, in corroboration of what I have been saying.

One night, Mr. F., a most respectable merchant of the town, while on his way home, was stopped and robbed. The man who committed the robbery was very well
known to the gentleman whom he robbed: he was a waterman, owning a boat, and plying betwixt the pier and the vessels. Next morning, Mr. F. having occasion to go out to a vessel, walked down to the pier, and was stepping into a boat, when another man offered his services; Mr. F., without turning to look at the man who spoke, said this was his ordinary boatman, and he always employed men whom he knew. "What, sir," said the other, lifting his hat above his brow, "don't you know me?" Mr. F. turned round, and saw the man who had robbed him the night before; and yet, to prosecute a man, who thus in open day claimed the recollection of the person he had robbed, would be a hazard that no prudent inhabitant of Malaga dare encounter.

I found the pictures presented by the street population of Malaga interesting, because they were novel; but the streets themselves presented little attraction. The only handsome part of the town is the Alameda; the other parts present a labyrinth of narrow, intricate streets, almost wholly inhabited by the tradespeople, or by a low population; but
the buildings that line both sides of the Alameda are magnificent, and the interior of many of these houses, I found more splendid than any thing I had yet seen in Spain. The public buildings are but indifferent; with the exception of the cathedral, which is greatly admired by the people of Malaga; but which, after having seen those of Toledo and Seville, possesses but little attraction. Like the cathedral of Cadiz, it is not finished; it was intended to be surmounted by six towers, but only one of these has been erected. There are no pictures in the cathedral, nor are there any worthy of notice in the other churches or convents of the city.

The state of society in Malaga, does not greatly differ from that of the other cities in the south of Spain; but there is one strange peculiarity in Malaga society, that cannot but forcibly strike a stranger: this is, the extraordinary familiarity of servants. I have frequently seen servants at table, join in conversation with the family: a female servant while receiving orders, always sits down in the company of her mistress; and, upon one occasion, while a game at basto was playing,
I saw a servant who had brought refreshments, walk forward to the table, place his two pecetas upon it, retire, and wait at a little distance to know the fate of his stake.

With respect to morals, I might repeat what I have said of Cadiz: I may merely add, that a Spanish lady of Malaga, married to a highly respectable Scotch merchant and consul, and who had resided all her days there, told me that she did not know one Spanish woman in Malaga who had always led a virtuous life. So universal is the system of gallantry in Malaga, that a gentleman is not designated as señor so and so, but invariably as the cortejo of this or that señora. In another respect, too, the low state of morals is shewn; I allude to the great laxity of female conversation. I was informed by the English mother of three grown-up daughters, that it was impossible to allow them to keep company with either married or unmarried Spanish women; and this I can very well believe, judging by the tone of conversation to which I have myself been witness.

Last autumn, Malaga supported an Italian opera; at which I was twice present. Upon
one of these occasions, La Gaza Ladra was performed, and not ill performed. The Prima Donna was a sister of Malibran,—a very inferior singer to her celebrated relative, but by no means despicable, and she was well supported both in the vocal parts and by the orchestra. The theatre was crowded, and the dresses of the ladies might be called splendid. The love of dress is carried to a great length in Malaga. A young lady, fifteen years of age, who was of the same party with myself at the opera, told me that she had given twenty dollars for her fan; and another young person, the daughter of a small tradesman in Malaga, told me, when I admired her comb, that it had cost fourteen dollars. It was a curious spectacle in leaving the theatre, to see some hundreds of servants with lanterns waiting in the street. Gentlemen and ladies, have alike their lantern to light them home. To attempt the dark narrow streets of Malaga without this accompaniment, would be to tempt the mala gente, and certainly to encounter great and unnecessary risk. It was a very unseasonable interruption, just when every servant had
discovered his master, and when the line of march had begun, to hear the little bell that announced the approach of the host. All the lights were suddenly arrested in their progress, and the procession passed through an avenue of kneelers, illuminated by the hundreds of lanterns that were placed upon the ground,—the spectacle was undoubtedly picturesque.

I consider myself to have had rather a narrow escape while at Malaga, in a visit which I made to the ruins of the castle. The ruins of the Moorish fortifications are of extraordinary extent; they reach from the city to the summit of the hill that flanks it to the east,—a distance not much less than a mile; and desirous of inspecting the ruins, as well as of enjoying the views which I had no doubt were to be enjoyed from the heights, I devoted an afternoon to this walk. As I ascended, occasional gaps in the ruins discovered charming glimpses over the city, the sea, and the mountains; and at one spot, where a half-fallen spiral staircase leads to the summit of a round tower, whose ruins flank the wall,—the whole magnificence of
the prospect burst upon me. The city, washed by the Mediterranean,—the fertile plain to the north of Malaga, covered with gardens and orangeries, and sprinkled with villages and convents, and the fine range of magnificent and curiously broken mountains that environ that little plain;—the situation of Malaga leaves nothing to desire. I had not yet ascended above half way,—and the higher up, the more extensive are the ruins; the lower part being occupied by fortifications, but the upper half of the hill being covered with the remains of the castle. Soon after leaving the tower, I passed three ruffian-looking men sitting under the wall playing cards; and perhaps prudence ought to have whispered to me to return; but an Englishman with difficulty persuades himself of the possibility of violence in day-light; and the sun being above the horizon, I continued my walk. Higher up, I found myself entirely enclosed among the ruins; and having gone so far, and believing that I could be at no great distance from the summit, I resolved not to return by the same road, but to find some path that might lead me down the other side of the
hill, either towards the sea or the back of the city. I therefore continued threading my way among the ruins. I had reached a very solitary spot, entirely shut in by massive walls, when, passing within ten or twelve yards of a low archway, scarcely two feet above the ground, I chanced to turn my eye in that direction, and was startled by seeing the dark countenances of two men peering from the mouth of it, their bodies being concealed by the gloom within. All that I had heard and knew of the character of the lowest class in Malaga, suddenly recurred to my mind; I felt the full danger of my situation, and walking a few wide paces farther, as if I had not observed them, till a fragment of the ruin was fortunately intercepted between me and the arch, I sprung forward with no tardy step; but not before a stealthy glance had shewn me the figure of one man already half way between the arch and myself, and another on the point of emerging from his lurking place. I have not the smallest doubt, that if these men had been aware of my approach, or if, in the hurry of the moment, I had mistaken my path among the ruins, or found no
outlet, I should never have returned to write this volume: fortunately, however, I had not run more than twenty yards, when a gap in the wall shewed me the open country below, and the next moment I had passed through it, and dropped into a small olive plantation. I made what haste I could, down the hill to the city; and when I related the circumstance that had taken place, I was told I had been guilty of an imprudence that no one acquainted with Malaga would have ventured upon; that robbery, and murder also, had been perpetrated among these ruins; and that I owed my escape to nothing but the lucky accident of finding a speedy exit.

When we think of Malaga, it is generally in connexion with its wines; which, although not so much in vogue in England as in other times, yet enjoy a high reputation, and along with its fruits, form the distinction and the wealth of Malaga. I shall therefore make no apology for occupying a few pages with some details respecting the wines and fruits of this most southern city of the continent of Europe.
The wines of Malaga are of two sorts, sweet, and dry; and of the former of these, there are four kinds. First, The common "Malaga," known and exported under that name. In this wine there is a certain proportion of boiled wine, which is allowed to burn, and which communicates a slightly burnt taste to the "Malaga." The grape from which this wine is made, is a white grape, and every butt of Malaga contains no less than eleven gallons of brandy.

Secondly, "Mountain." This wine is made from the same grape as the other, and like the other, contains colouring matter, and brandy; the only difference is, that for "mountain," the grape is allowed to become riper. Thirdly, "lagrimas," the richest and finest of the sweet wines of Malaga; the name of which almost explains the manner in which it is made. It is the droppings of the ripe grape hung up, and is obtained without the application of pressure.

The dry wine of Malaga is produced from the same grape as the sweet wine, but pressed when greener; in this wine there is
an eighth-part more of brandy than in the sweet wine; no less than one twelfth part of the dry Malaga being brandy.

The whole produce of the Malaga vineyards is estimated at from thirty-five to forty thousand butts, but owing to the increasing stock of old wine in the cellars, it is impossible to be precise in this calculation. The export of all the Malaga wines may be stated at about twenty-seven thousand butts. The principal market is the United States, and the States of South America; and to these countries, the export is rather upon the increase. The average price of the wines shipped from Malaga, does not exceed thirty-five dollars per butt; but wines are occasionally exported at so high a price as one hundred and seventy dollars. Many attempts have been made at Malaga to produce sherry, but not with perfect success. The Xeres grape has been reared at Malaga, upon a soil very similar to its native soil; but the merchants of Malaga have not ventured to enter the wine for export. For my own part, judging from a sample of wine which I tasted at the warehouse of Messrs.
W. & G. Read, I should say that the experiment had succeeded; and that the sherry made at Malaga, might be introduced into the English market as sherry; and from its great cheapness, it could not fail to command a sale. One reason of the very low price of the wines of Malaga, is to be found in the cheapness of labour: field labour is only two and a half reals a day (4½d.). In the fruit and vintage time it is about double.

Next to its wines, the chief export of Malaga is fruit; consisting of raisins, almonds, grapes, figs, and lemons: but of these, raisins are the principal. I have before me, a note of the exports of Malaga for the months of September and October, in the year 1830—the chief, though not the sole exporting months,—and I find, that during that time, the export of raisins amounted to two hundred and sixty-eight thousand, eight hundred and forty-five boxes; and thirty-one thousand, nine hundred and sixteen smaller packages. Of this quantity, one hundred and twenty-five thousand, three hundred and thirty-four boxes were entered for the United States; forty-five thousand, five hundred and
thirteen for England; the remaining quantity being for France, the West Indies, the Spanish ports, South America, and Holland.

The raisins exported from Malaga are of three kinds; the muscatel, the bloom, or sun raisin, and lexias. The muscatel raisin of Malaga, is the finest in the world. In the preparation of this raisin, no art is used; the grape is merely placed in the sun, and frequently turned. The bloom, or sun raisin, is a different grape from the muscatel; but the process of preparing it is the same: like the other, it is merely sun-dried. The lexias acquire this name from the liquor in which they are dipped, and which is composed of water, ashes, and oil: these, after being dipped, are also dried in the sun. All muscatel raisins are exported in boxes, and also a part of the bloom raisins. In the year 1829, the number of boxes of muscatel and bloom raisins exported, was three hundred and twenty thousand; each box containing twenty-five lbs.—eight millions of lbs. in all. This quantity is independent of the export of bloom raisins in casks; and of lexias, the
annual export of which, does not exceed thirty thousand arrobas. The export of
raisins to England has fallen off; the export to America has constantly increased. In the
year 1824, seventy-five ships cleared from the port of Malaga, for England, with fruit.
In 1830, up to the first of November, thirty-four vessels had cleared out. It is supposed,
that Cadiz having been made a free port, will have the effect of increasing the export fruit
trade of Malaga. Owners are unwilling to send out vessels from England on ballast;
and it is probable, that many will carry out goods to Cadiz, and then proceed to Malaga
to take back a cargo, or part cargo of fruit.

Of the other fruits exported from Malaga, grapes, almonds, and lemons are the most
extensively exported. In the months of September and October, 1830, eleven thousand
six hundred and twelve jars of grapes were sent to England; to America, six thousand
four hundred and twenty-nine; and to Russia one thousand six hundred and fifty. During
the same period of time, five thousand three hundred and thirty-five arrobas of almonds
(133,375 lbs.) were exported to England;
and this constituted nearly the whole export: and during these months also, there were exported to England, three thousand seven hundred and fifty-nine boxes of lemons; to Germany, four thousand two hundred and one boxes; and to Russia, eight hundred and forty boxes. There is also a large export of oil from Malaga: but the export for the latter part of 1830 would be no criterion of the average; because the Greenland whale fishery having failed, extensive orders for olive oil had been received from England. Eight hundred and twenty-seven pipes of oil had been exported for the British market during the above months.

The general trade between England and Malaga is on the decline: that with both the Americas is increasing, especially in wines. The number of British vessels which entered the port of Malaga in 1827, I find, from an official note furnished by the British consul, to have been one hundred and four; in 1828, one hundred and twenty-six; in 1829, one hundred and five; in 1830, up to the 1st of November, eighty-three, exclusive of the...
small Gibraltar vessels). The number of American vessels entering in 1829, was fifty-five; but the average tonnage of the Americans being one hundred and seventy-five tons, and that of the English vessels not exceeding one hundred, the whole American is nearly equal to the whole of the English trade.

Whilst I remained in Malaga, my time was very agreeably employed; the weather was sufficiently cool to allow horse and foot exercise; and the neighbourhood of Malaga affords many charming excursions: these pleasantly filled up the mornings; while a stroll on the sea shore, the many hospitalities of English, American, and Spanish families, and the theatre or opera, agreeably occupied the evening. Among my excursions in the neighbourhood, one was made to the convent of Victoria, beautifully placed in a hollow of the neighbouring mountains, surrounded by charming gardens, where the most delicious fruits vie with each other in tempting the palate. Among the autumnal fruits of the south of Spain, they particularly prize the granada, or pomegranate, on account of its
